# Number Puzzles <br> Grade 4 <br> Mathematics Formative Assessment Lesson 

Designed and revised by Kentucky Department of Education Mathematics Specialists Field-tested by Kentucky Mathematics Leadership Network Teachers

If you encounter errors or other issues, please contact the KDE team at:
kdemath@education.ky.gov

Created for the sole purpose of assisting teachers as they develop student understanding of Kentucky's Core Academic Standard through the use of highly effective teaching and learning.

Not intended for sale.

## Fourth Grade

This Formative Assessment Lesson is designed to be part of an instructional unit. This task should be implemented approximately two-thirds of the way through the instructional unit. The results of this task should then be used to inform the instruction that will take place for the remainder of your unit.

## Mathematical goals

This lesson is intended to help you assess how well students are able to use "clues" about numbers including: factors, multiples, prime, composite, square, even, odd, etc. In particular, this unit aims to identify and help students who have difficulties with:

- understanding the difference between primes and composites.
- understanding the difference between factors and multiples.

## Common Core State Standards

This lesson involves mathematical content in the standards from across the grade, with emphasis on:

## Operations and Algebraic Thinking 4.0A

- Gain familiarity with factors and multiples

This lesson involves a range of mathematical practices from the standards, with emphasis on:

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Attend to precision.
4. Look for and make use of structure.

## Introduction

This lesson unit is structured in the following way:

- Before the lesson, students work individually on an assessment task that is designed to reveal their current understanding and difficulties. You then review their work, and formulate questions for students to answer, to help them improve their solutions.
- During the lesson, students work in pairs and threes to use the number puzzles and clue cards to match the mystery number.
- In a whole-class discussion, explain their answers.
- Finally, students return to their original assessment task, and try to improve their own responses.

## Materials required

- Each individual student will need two copies of the worksheet Number Puzzles.
- Each small group of students will need a packet of each set of the following card sets copied and cut up before the lesson:
- Card Set A: CLUES
- Card Set B: TASK CARDS
- Card Set C: MYSTERY NUMBER
- A page of Hundreds Boards and Blank Graph Paper have been provided for students who may need this support. It is not required that each student get these copies.

## Time needed

Approximately fifteen minutes for the assessment task, a one-hour lesson, and 15 minutes for the students to review their work for changes. All timings are approximate. Exact timings will depend on the needs of the class.

## Before the lesson

## Assessment task:

Have the students do this task in class a day or more before the Formative Assessment Lesson. This will give you an opportunity to assess the work and to find out the kinds of difficulties students have with it. Then you will be able to target your help more effectively in the follow-up lesson.

Give each student a copy of Number Puzzle. Introduce the task briefly and help the class to understand the problem and its context.

Spend fifteen minutes on your own, answering these questions.

Don't worry if you can't figure it out.
There will be a lesson on this material [tomorrow] that will help you improve your work.
Your goal is to be able to answer these questions with confidence by the end of that lesson.

It is important that students answer the question without
 assistance, as far as possible.
If students are struggling to get started, ask them questions that help them understand what is required, but do not do the task for them.

## Assessing students' responses

Collect students' responses to the task. Make some notes on what their work reveals about their current levels of understanding. The purpose of this is to forewarn you of the issues that will arise during the lesson, so that you may prepare carefully.

We suggest that you do not score students' work. The research shows that this is counterproductive, as it encourages students to compare scores, and distracts their attention from how they may improve their mathematics.

Instead, help students to make further progress by asking questions that focus attention on aspects of their work. Some suggestions for these are given on below. These have been drawn from common difficulties anticipated.

We suggest that you write your own lists of questions, based on your own students' work, using the ideas below. You may choose to write questions on each student's work. If you do not have time to do this, select a few questions that will be of help to the majority of students. These can be written on the board at the beginning of the lesson.

Common issues - Suggested questions and prompts:

| Common Issues | Suggested questions and prompts |
| :--- | :--- |
| Student doesn't find all factor pairs for a <br> given number. | How can you make sure you haven't left out <br> any factor pairs for a number? <br> How can you use rectangular arrays to <br> decide if you have all the factor pairs? How <br> can you use a factor tree to decide if you <br> have all the factor pairs? How could you <br> make a chart to decide if you have all the <br> factor pairs? |
| Student doesn't have a strategy to find <br> the factors of a number. | - Can you think of a way that we can model <br> this problem? |

## Suggested lesson outline

## Whole-class interactive introduction (10 minutes)

Give each student a mini-whiteboard, a marker, and an eraser.
Explain to the class that in the lesson they will be working with factors and multiples.
Now project Slide 2 of the projector resource onto the board (or draw the diagrams on the board).

Ask students to write on their mini-whiteboards the answers to questions such as the following. Each time, ask students to explain their method.

Let's look at Number Puzzle 1.
There is more than one way to solve this number puzzle. Can you think what one of them might be? [Record student responses on the board.]

Let's look closer at some strategies. [Students may have suggested these and you can look closer at the strategy at that time.]

## Puzzle 1

1-This number of tiles will make a rectangle 3 tiles wide.
2-This number of tiles will make a rectangle 4 tiles wide.
3 - This number is greater than 20.
4 - This number is less than 30 .

ARRAYS: [Slides 3-5]
Using between 20 and 30 squares, how many arrays can you make that will be 3 tiles wide? [Allow students to use graph paper or square tiles to make as many arrays as they can.]

Now using between 20 to 30 squares, how many arrays can you make that will be 4 tiles wide?

Are any of your arrays the same?
Could this be your mystery number?
Does it meet the criteria for all the clues?

HUNDREDS CHART: [Slide 6]
[The use of a hundred's board may be beneficial to some students to "mark off" numbers that do not fit the criteria for the number puzzles. All of the solutions are for numbers of 100 or less.]

Let's look at the numbers between 20 and 30.
Which of these numbers are multiples of 3?

| Lets look at thenumbers between 20 and 30. | Hundreds Chart |  |
| :---: | :---: | :---: |
|  |  | Which of thesenumbers is a |
|  |  |  |
|  | (1) 31 |  |
|  |  |  |
|  |  | Which of thesenumbers is a |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  | Which number bet ween 20 and 30 is a multiple of 3 AND 4 ? |  |

Which are multiples of 4 ?
Are there any common multiples that could be the mystery number?

## Collaborative activity ( 30 minutes)

Organize the class into groups of two or three students. With larger groups, some students may not fully engage in the task.

Give each group Card Set A: Clues, Card Set B: Task Cards, and Card Set C: Mystery Number.
Explain to students how they should work together:
Place the Clue Cards and Mystery Numbers face up so everyone in the group can see the clues and numbers.

Choose one Number Puzzle to solve at a time.
Find the four clues that match the Number Puzzle your group is solving. Divide the Clue Cards among the group.

Solve for the Mystery Number by using a strategy your group is comfortable with. Every group member should help solve for the mystery.

After your group has reached a consensus, match the Number Puzzle Card to the Mystery Number Card.

Set these two cards aside and place the Clue Cards face up with the other clues.
Choose another Number Puzzle to solve.
To remind students about these instructions, you could use slide 7, Instructions for Working Together.
While students are working, you have two tasks: to find out about students' work and to support their reasoning.

## Find out about students' work

As you move around the room listen to students' explanations.
Note any difficulties that emerge for more than one group; these can be discussed later in the lesson.
Your tasks during the small group work are to make a note of student approaches to the task, and to support student problem solving.

You can then use this information to focus a whole-class discussion toward the end of the lesson. In particular, notice any common mistakes. For example, students may know how to find a mystery number represented by two of the clues, but have difficulty finding the answer when all four clues are used.

## Make a note of student approaches to the task

Try not to make suggestions that move students toward a particular approach to this task. Instead, ask questions to help students clarify their thinking. Encourage students to use each other as a resource for learning.

Students will correct their own errors as they find matches for all the cards.
Wrap up the lesson when students are completely satisfied with their own work by having them glue or tape their cards together in solution sets that include number puzzles and mystery cards that match.

## Sharing work ( 10 minutes)

When students get as far as they can with matching cards, ask one student from each group to visit another group's work. Students remaining at their desk should explain their reasoning for the matched cards on their own desk.

If you are staying at your desk, be ready to explain the reasons for your group's matches.
If you are visiting another group, write your card placements on a piece of paper. Go to another group's desk and check to see which matches are different from your own.

If there are differences, ask for an explanation. If you still don't agree, explain your own thinking.

When you return to your own desk, you need to consider, as a group, whether to make any changes to your work.

Students may now want to make changes.

## Improve individual solutions to the assessment task ( 10 minutes)

Return to the students their original assessment, Number Puzzles, as well as a second blank copy of the task.

Look at your original responses and think about what you have learned this lesson.
Using what you have learned, try to improve your work.

If you have not added questions to individual pieces of work then write your list of questions on the board. Students should select from this list only the questions appropriate to their own work.
If you find you are running out of time, then you could set this task in the next lesson, or for homework.

## Solutions

## Assessment Task: Number Puzzles

For questions 1 and 2 student responses will vary depending on how they solve multiplication problems. Be sure that the responses have correct interpretations of each model.

Question 1:

| \# of <br> shifts | 1 | 2 | 3 | 4 | 6 | 8 | 12 | 24 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| \# of <br> hours | 24 | 12 | 8 | 6 | 4 | 3 | 2 | 1 |

Question 2: The dimensions of the sides of the rectangles should be the factors for 32. Students should drawn rectangles with the following dimensions:
$1 \times 32,2 \times 16,4 x 8$ (or the reverse $32 x 1,16 x 2,8 x 4$ )
Question 3: Numbers with exactly three factors would be square numbers. Square numbers between 12 and 40 are: $16,25, \& 36$. Only 25 has just three factors.

Question 4: only one because prime numbers only have two factors - one and itself.
For example, 7 is prime and has only factors 1 and 7 so the only array would be 1 x 7 (or 7 x 1 ).
Question 5: All prime numbers are odd, except for the number 2. So ODDS have more prime numbers.

These materials were adapted from Connected Mathematics: Prime Time, and Investigations in Number Data \& Space: Mathematical Thinking.

## NUMBER PUZZLES

1.) A restaurant is open 24 hours a day. The manager wants to divide the day into work shifts of equal length. Show the different ways this can be done. The shifts should not overlap, and all shifts should be a whole number of hours long.
2.) Sammie's Game Store wants to rent a space of 32 square units. Find all the possible ways Sammie can arrange the squares. How are the rectangles you found related to the factors of 32?
3.) Lewis has chosen a mystery number. His number is larger than 12 and smaller than 40 and it has exactly three factors. What could his number be?
$\square$
4.) How many rectangles can you build with a prime number of square tiles?
5.) Which group of numbers - evens or odds- has more prime numbers? Why?
$\square$

| A - This number will make a rectangle 3 tiles wide. | $F$ - This number is a multiple of 5. |
| :---: | :---: |
| B - This number has exactly 8 factors. | G - This number has an odd number of factors. |
| C-1 factor of this number is 4 . | H - This number is a square number. |
| D - This number is not a multiple of 5 or 7 . | I- This number is not even and is less than 50. |
| E - Add the digits of this number and the sum is odd. | J - The product of the digits of this number is greater than 20. |
|  |  |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## Number Puzzles $4^{\text {th }}$ Grade Formative Assessment Lesson

## What is the Mystery Number?

## Puzzle 1

1-This number of tiles will make a rectangle 3 tiles wide.
2-This number of tiles will make a rectangle 4 tiles wide.
3 - This number is greater than 20.
4 - This number is less than 30 .

## Arrays 3 Squares Wide
